DETAILED ACTION***Double Patenting***

1. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

2. Claims 1-13 are rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1-13 of prior U.S. Patent No. 6661897. This is a double patenting rejection.

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an

Art Unit: 2644

invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 14-25 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 14-25 of U.S. Patent No.6661897. Although the conflicting claims are not identical, they are not patentably distinct from each other because each invention discloses a stethoscope with a specifically design transducer.

Regarding claim 14, claim 14 of USPN 6661897 (herein, USPN-897) discloses a diaphragm, a fixed conductive plate, a capacitance-to-electrical conversion means, therein as claimed.

Regarding claim 15, claim 15 of USPN-897, discloses a diaphragm, and a conversion means, therein as claimed.

Regarding claim 16, claim 16 of USPN-897, discloses diaphragm displacement, therein as claimed.

Regarding claim 17, claim 17 of USPN-897, discloses a permanently magnetized material, and a magnetic field to electrical conversion means, therein as claimed.

Regarding claim 18, claim 18 of USPN-897, discloses an electrical conductor, and a magnetic field sensing means, therein as claimed.

Regarding claim 19, claim 19 of USPN-897, discloses an electrical coil, a permanent magnet or electromagnetic, therein as claimed.

Art Unit: 2644

Regarding claim 20, claim 20 of USPN-897, discloses an electrical coil, a permanent magnet or electromagnetic, and an electrical circuit, therein as claimed.

Regarding claims 21 and 23, claim 21 and 22, respectively of USPN-897, discloses an optically reflective plane, a light emitter, a light detector, and a conversion means, therein as claimed.

Regarding claim 22 and 24, respectively, claim 23 and 24, respectively of USPN-897, discloses an optically transmissive element, a light emitter and detector, and a conversion means, therein as claimed.

Regarding claim 25, claim 25 of USPN-897 discloses a diaphragm, a fixed conductive plate, a capacitance-to-electrical conversion means, therein as claimed.
